DETAILED ACTION

1. Applicant's Amendment filed 01/17/2006 has been reviewed and placed of record in the file.

Allowable Subject Matter

2. Claims 1- 22 and 84-105 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious a memory cell comprising a p-channel floating gate transistor having all exclusive limitations as recited in claims 1, 9, 17, 84, 89, 90, 95, 100, and 102, comprising an asymmetrical intergate insulator between a floating gate (FG) and a control gate (CG), the asymmetrical intergate insulator has a barrier height with respect to the floating gate that is different from a barrier height with respect to the control gate to promote easier erase operations and longer retention, characterized in that either: easier erase operations use electron tunneling from the FG to the CG; or: the second metal layer has a different work function from the first metal layer to further promote easier erase operation and longer retention (claims 17 and 102); or: the vertical p-channel depletion mode nonvolatile memory cell includes a horizontally oriented floating gate formed alongside of the body region (claim 100).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
